

ABM wallet specifications

2 April 2021

The ABM wallet will be an easy to use cryptocurrency wallet available for both Android and iOS.

The main features of the ABM wallet are:

- Easy user onboarding process, which includes private key generation using BIP39 and secure key storage;
- Ability to securely register and deregister mobile devices;
- optional private key recovery feature, which is essential for non-tech savvy users;
- **A user's telephone number will be the principal identifier in the ABM wallet;**
- Users will be able to send assets to another telephone number
- Users will be able to purchase cryptocurrencies using their credit card
- The user interface will be kept extremely simple, but with the option to optionally display more advanced features, such as IOU features (must be activated by the user)
